

P408

P408 -Chronic kidney disease, progression and biomarkers

Professor Nigel Brunskill², Prof Maarten Taal¹

¹Nottingham/ Derby, , ²Leicester, ,

Our aims:

- providing a forum for researchers investigating all aspects of CKD (diabetic and non-diabetic)
- facilitating the development of protocols for studies in people with CKD
- advocating for funding of studies on CKD
- promoting collaborative working between centres to deliver studies on CKD
- providing a point of contact for companies wishing to engage in CKD-related research in the UK
- collaborating with the UK Renal Registry to optimise use of data for research and quality improvement projects
- facilitating discussion with industry partners to develop and deliver cost-effective studies of interventions to improve outcomes in CKD
- co-operating with other CSGs to promote research in areas where there is overlap between fields.

Who we are:

We are a group of leading clinical investigators from all parts of the UK with a specific research interest in chronic kidney disease including diabetic kidney disease. Membership is open to all investigators with an interest in CKD and to all professional groups.
